

Abstract of Disclosure

1
2 A wood-drilling apparatus includes a table, a wall, at least one cylinder, a
3 jig and at least one drill. The wall is installed on the table. The cylinder is
4 vertically movably mounted on the wall. The cylinder defines an inclined
5 passageway. The jig is installed on the table for pushing a workpiece
6 against the cylinder. The drill is movably inserted in the inclined
7 passageway for drilling the workpiece.
